Scotland on Sunday, 2nd April: 3-page feature

Scotland is stubbornly clinging on to the unenviable title as one of the least healthy nations in Europe, with poor eating habits causing high levels of chronic illness such as cancer, cardiovascular disease and diabetes and countless early deaths.

Cases of malnutrition in children have risen dramatically over the past few years and obesity is also rocketing.

Two out of three Scottish adults are overweight, with rates in young children suggesting this is set to increase.

The current cost seeing shocking levels of people unable to afford the table, with use of other charitable services rising.

Scotland and the rest of the UK have the highest levels of food bank use in the UK. The figures show almost a doubling of use in 2022, a drop from 2021, but still considerably high.

Meanwhile, more and more community kitchens are springing up to help the most affected.

'If you look at the way Scotland feeds itself just now unhealthy food tends to be the cheapest'

'Companies are not required to care how much damage they cause'
